Mansarovar Global University, Bilkisganj, Madhya Pradesh.

**ABSTRACT**

Information sources often refer to library resources. Books, journals, newspapers, and other editorials made up the majority of these sources in the past, along with encyclopaedias. Digital sources of knowledge, however, got up to date with the development of the web. In today's digital environment, information is extremely vital. Due to changes in user information demands and technology improvements, this is now achievable. All facets of human life now revolve on technology, and libraries are no different. Both public and private institutions are a part of India's higher education system. The Government of India and the state governments fund public universities, whereas numerous organisations and groups mostly finance private institutions. In the global framework of higher education, university libraries hold a special place of significance. In addition to serving as knowledge stores, libraries also act as knowledge distributors. Without a doubt, the country as a whole suffers when libraries at universities and other institutions of higher learning are neglected or not given the respect they deserve. This is because the standards of study, teaching, and research heavily rely on the characteristics and scope of the services provided by university libraries.
